

LAGRANGE LOCK AND DAM GUARD SHACK

Mobile Modular created a moveable control shed to control the LaGrange Dam and its locks. If dam waters rise, the shed can easily be relocated!

THE CHALLENGE

LaGrange Lock and Dam is a complex on the Illinois River at Versailles, Illinois. The U.S. Army Corps of Engineers built the complex from 1936 to 1939. LaGrange Lock and Dam needed a Control Shed that would be placed inside the dam area to control the dam and locks. When river waters rise, the control shed needs to be moved out of the dam for safety reasons.

Customer Name: LaGrange Lock and Dam

Project Location: Versailles, IL

Building Type(s): Modular Specialty

Job Type: Sale

Total Sq. Ft: 64 sq. ft.

THE SOLUTION

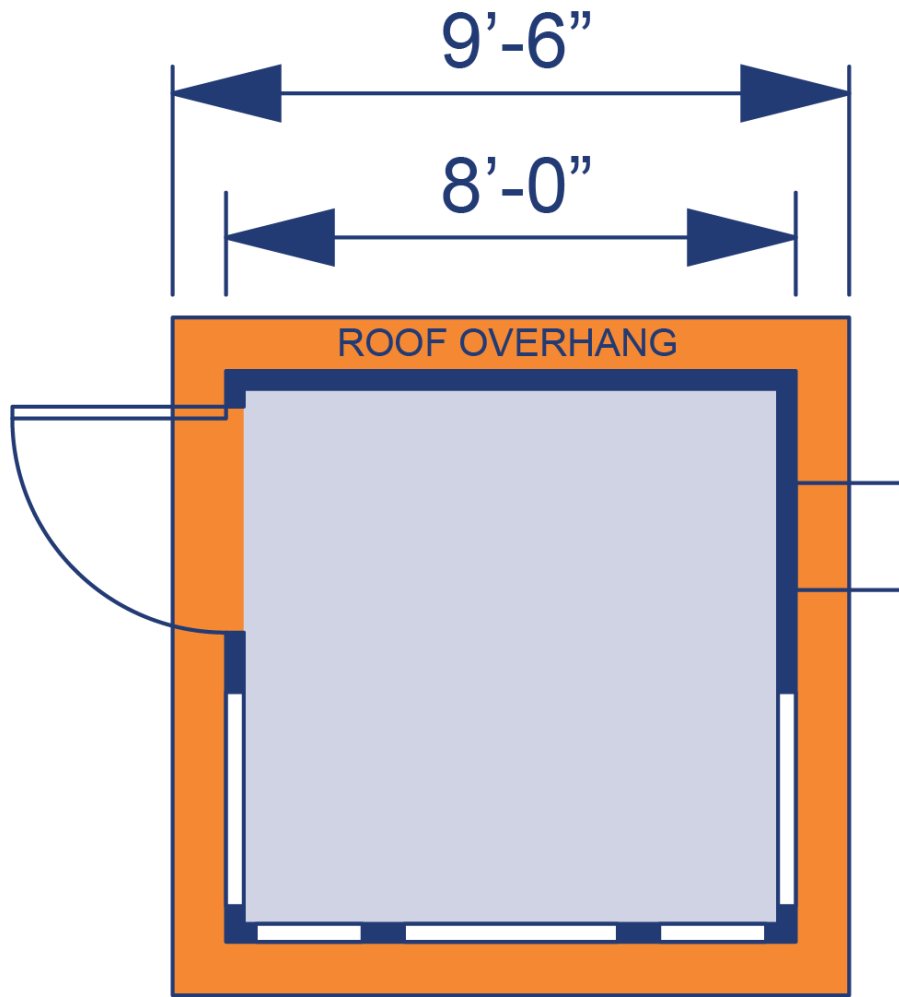

Mobile Modular was contracted to provide two 8×8 modular units for their ease of portability and quick electrical disconnect to relocate out of the dam area. The walls are composed of 3" thick composite sandwich panels and have a 90 MPH wind load. This unit is also constructed with a 1/12 pitch shed roof, 20 gauge insulated steel doors with glass, LED lights, an electrical package for quick release during transport, and an HVAC system.
